Structure

Background

D77 is anti-HIV-1 inhibitor targeting the interaction between integrase and cellular LEDGF/p75. D77 inhibits HIV-1(IIIB) replication by EC50 value of 23.8 $\mu g/ml$ in MT-4 cell (5.03 $\mu g/ml$ for C8166 cells). IC50 value: 23.8 $\mu g/ml$ (EC50, in MT-4 cell), 5.03 $\mu g/ml$ (EC50, in C8166 cell) Target: HIV-1 in vitro: D77 exhibits a highly specific binding affinity to HIV-1 integrase catalytic core domain. D77 induces a dramatic concentration-dependent decrease of α -galactosidase activity compared to the D77-untreated cells. D77 reveals a significant inhibition activity against the interaction of IN with IBD.
