Structure **Background**

Tubulysin E is a highly cytotoxic peptide isolated from the myxobacterial species *Archangium geophyra* and *Angiococcus disciformis*. Tubulysin displays extremely potent cytotoxic activity in mammalian cells, including multidrug-resistant cell lines, with IC₅₀ values in the lower nanomolar range[1]. Tubulysin E is a cytotoxic activity tubulysin which inhibits tubulin polymerization and leads to cell cycle arrest and apoptosis[2].
