Structure

**Background**

Omeprazole metabolite Omeprazole sulfone (methoxy-d3) (Omeprazole sulfone (methoxy-d3)) is the deuterium labeled Omeprazole metabolite Omeprazole sulfone. Omeprazole sulfone is a metabolite of Omeprazole, which is a proton pump inhibitor.

Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs[1].
