Structure

Background

m-PEG11-Amino is a cleavable **ADC linker** used in the synthesis of antibody-drug conjugates (ADCs). m-PEG11-Amine is also a PEG-based PROTAC linker that can be used in the synthesis of PROTACs^[1].

ADCs are comprised of an antibody to which is attached an ADC cytotoxin through an ADC linker.

PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins
