Structure

Background

2,3,4,6-Tetra-o-acetyl-alpha-galactosylpyranosyl bromide is an alkyl chain-based PROTAC linker that can be used in the synthesis of PROTACs^[1].

PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins^[1].
