Structure

### Background

Biotin-PEG-azide (MW 600) is a PEG-based **PROTAC linker** can be used in the synthesis of PROTAC<sup>[1]</sup>.

PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein<sup>[1]</sup>.

PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins<sup>[1]</sup>.
