Structure

Background

Bis-PEG21-NHS ester is a PEG/Alkyl/ether-based **PROTAC linker** can be used in the synthesis of PROTACs. Bis-PEG21-NHS ester is a cleavable **ADC linker** used in the synthesis of antibody-drug conjugates (ADCs)^[1].

PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins.

ADCs are comprised of an antibody to which is attached an ADC cytotoxin through an ADC linker.
