Introduction

IFN-gamma produced by lymphocytes activated by specific antigens or mitogens. IFN-gamma, in addition to having antiviral activity, has important immunoregulatory functions, it is a potent activator of macrophages, and has antiproliferative effects on transformed cells and it can potentiate the antiviral and antitumor effects of the type I interferons.

Stability

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please avoid freeze thaw cycles.

Background

Interferon-gamma Mouse Recombinant produced in E. Coli is a single, non-glycosylated polypeptide chain containing 158 amino acids (23-155a.a.) and having a molecular mass of 18.2kDa. IFNG is fused to a 25 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques.
