
Product Data Sheet

Product Name: LDHB
Cat. No.: GP21875
Batch No.: 1

Product Data

Purity	>98%	Source	Escherichia Coli.
Physical Appearance	solid	Shipping Condition	Shipped at Room temp.
Synonyms	Lactate Dehydrogenase; LDH.		
Solubility	It is recommended to reconstitute the lyophilized LDH in sterile 18MΩ-cm H ₂ O not less than 100 µg/ml, which can then be further diluted to other aqueous solutions.		
Formulation	The protein (1 mg/ml) was lyophilized with 0.1mg potassium phosphate.		

Introduction

Lactate dehydrogenase (LDH) is an enzyme (EC1.1.1.27) present in a wide variety of organisms, including plants and animals. A tetrameric enzyme that catalyses the interconversion of pyruvate and lactate with concomitant interconversion of NADH and NAD⁺. At high concentrations of pyruvate, the enzyme exhibits feedback inhibition and the rate of conversion of pyruvate to lactate is decreased. In vertebrates, genes for three different subunits (LDH-A, LDH-B and LDH-C) exist.

Biological Activity

The specific activity was found to be 258 U/mg protein.

Stability

Lyophilized Lactate Dehydrogenase although stable at room temperature for 3 weeks, should be stored desiccated below -18°C. Upon reconstitution LDH should be stored at 4°C between 2-7 days and for future use below -18°C. Please prevent freeze-thaw cycles.

Background

The DNA encoding chicken LDH-B is cloned from cDNA library of chicken heart.

Caution: Product has not been fully validated for medical applications. For research use only.
