### Introduction

B-cell CLL/lymphoma 7C (BCL7C) is identified by the likeness of its product to the N-terminal region of BCL7A protein. The BCL7A protein is encoded by the gene which is directly involved in a three-way gene translocation in a Burkitt lymphoma cell line. The function of the BCL7C gene has not been determined yet.

### Stability

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

### Background

BCL7C Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 240 amino acids (1-217 a.a) and having a molecular mass of 25.9kDa (Molecular size on SDS-PAGE will appear higher). BCL7C is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques.
