Introduction

Thy-1 membrane glycoprotein (CD90) is a cell membrane protein which contains one Ig-like V-type (immunoglobulin-like) domain. CD90 protein belongs to the immunoglobulin superfamily of adhesion molecules with constitutive expression on fibroblast cells. CD90 protein is involved in cell adhesion and cell communication in numerous cell types, predominantly in cells of the immune and nervous systems. CD90 may also have a role in cell-cell or cell-ligand interactions during synaptogenesis and other events in the brain. CD90 can be used as a marker for various stem cells and for the axonal processes of mature neurons. CD90 may serve as a tumor suppressor in nasopharyngeal carcinoma.

Stability

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.
