Introduction

RWD Domain Containing 1 (RWDD1) is a member of the RWDD1/GIR2 family. The RWDD1 protein protects DRG2 (developmentally regulated GTP binding protein 2), from proteolytic degradation. RWD domain refers to 3 signature motifs in proteins: RING finger, WD-repeats, and yeast DEAD (DEXD)-like motif. Current evidence proposes that RWD domain may be required for protein-protein interaction.

Stability

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Background

RWDD1 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 266 amino acids (1-243 a.a.) and having a molecular mass
