
Product Data Sheet

Product Name: VZV ORF9
Cat. No.: GP25358
Batch No.: 1

Product Data

| | | | |
|---------------------|--|--------------------|-------------------------|
| Purity | >98% | Source | |
| Physical Appearance | solid | Shipping Condition | Shipped with Ice Packs. |
| Formulation | 25mM Tris-Hcl pH 8.0, 1mM EDTA and 50% glycerol. | | |

Introduction

VZV is closely related to the herpes simplex viruses(HSV), sharing much genome homology. The known envelope glycoproteins (gB, gC, gE, gH, gI, gK, gL) correspond with those in HSV, however there is no equivalent of HSV gD. VZV virions are spherical and 150-200 nm in diameter. Their lipid envelope encloses the nucleocapsid of 162 capsomeres arranged in a hexagonal form. Its DNA is a single, linear, double-stranded molecule, 125,000 nt long. The virus is very susceptible to disinfectants, notably sodium hypochlorite. Within the body it can be treated by a number of drugs and therapeutic agents including aciclovir, zoster-immune globulin(ZIG), and vidarabine.

Stability

Varicella protein although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.

Background

The E.Coli derived recombinant protein contains the VZV ORF9 immunodominant regions, amino acids 6-28, 76-100.

Caution: Product has not been fully validated for medical applications. For research use only.
