## Product Data Sheet

---

Product Name: CFH Human  
Cat. No.: GP26253  
Batch No.: 1

### Product Data

Purity	>98%	Source	Human Plasma.
Physical Appearance	solid	Shipping Condition	withIcePacks
Synonyms	Complement factor H, H factor 1, CFH, HF, HF1, HF2.		
Formulation	CFH protein solution contains 10mM Sodium phosphate and 145mM NaCl, pH 7.3.		

### Introduction

Complement factor H (CFH) is an important regulatory component of the alternative pathway of complement. CFH prevents complement activation on host cells and tissues, mainly the kidney. CFH controls the formation and decay of the alternative pathway C3/C5 convertase and acts as a cofactor for factor I which proteolytically inactivates C3b when C3b is bound to factor H. The N-terminal 5 domains of CFH bind to C3b and inhibit binding of factor B thus reducing the formation of C3/C5 convertase. CFH also binds to preformed C3/C5 convertases and causes quick release of the catalytic subunit Bb. These activities are necessary for controlling the spontaneous activation of the alternative pathway amplification process in plasma. In addition, CFH controls the formation and decay of these enzymes when C3b is attached to the surface of particles.

### Stability

CFH Human is stable at 4°C if entire vial will be used within 2-4 weeks. Store, frozen below -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

### Background

Human Complement Factor H produced in Human plasma having a total molecular mass of 155kDa.

**Caution: Product has not been fully validated for medical applications. For research use only.**
