
Product Data Sheet

Product Name: CoV-2 Nucleocapsid
 Cat. No.: GP26414
 Batch No.: 1

Product Data

Purity >98%

Source

Phycal
Appearance solid

Shipping Condition

Amino Acid Sequence MSDNGPQNQRNAPRITFGGSDSTGSNQNGERSGARSKQRRPQGLPNNTASWFTALTQHGKEDLKFPRGQGVPIINTSSPDDQIGYRRATRRIRGG

Formulation CoV 2019 protein solution is supplied in PBS and 25mM K₂CO₃.

Introduction

A human infecting coronavirus (viral pneumonia) called 2019 novel coronavirus, 2019-nCoV was found in the fish market at the city of Wuhan, Hubei province of China on December 2019. The 2019-nCoV shares an 87% identity to the 2 bat-derived severe acute respiratory syndrome 2018 SARS-CoV-2 located in Zhoushan of eastern China. 2019-nCoV has an analogous receptor-BD-structure to that of 2018 SARS-CoV, even though there is a.a. diversity so thus the 2019-nCoV might bind to ACE2 receptor protein (angiotensin-converting enzyme 2) in humans. While bats are possibly the host of 2019-nCoV, researchers suspect that animal from the ocean sold at the seafood market was an intermediate host. RSCU analysis proposes that the 2019-nCoV is a recombinant within the viral spike glycoprotein between the bat coronavirus and an unknown coronavirus.

Stability

CoV 2019 Nucleocapsid protein is shipped on ice packs. Upon arrival, Store at -20°C.

Background

The E.Coli derived recombinant protein contains the Coronavirus 2019 full-length nucleocapsid: Gene bank- MN908947, fused to 6xHis tag at C-terminal and having a Mw. Of 48 kDa as appears on SDS-PAGE.

Caution: Product has not been fully validated for medical applications. For research use only.
